# North Texas Bentgrass Greens

This territory is characterized by weather extremes that can vary quickly throughout the year. Winters can be cold and icy, or remain cloudy and wet for several weeks before turning mild, with low moisture and sunny conditions. Summers can see wide fluctuations as well, with very hot and humid conditions giving way to warm or hot, dry weather.

Multiple products listed per month are meant to be a rotational option to control additional disease pressure that may occur.

<sup>1</sup> SLR = Standard Local Rate for the products shown; consult local extension recommendations in your region.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Plant health benefits related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin.

Always read and follow label directions.
