

Upper Midwest Regional Turf Spray Program

Greens – Cool Season

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

- Intrinsic® brand fungicides provide a strong foundation of plant health benefits, including broad-spectrum disease control, stronger roots and higher stress tolerance.
- The new, turf-safe Maxtima® fungicide is a DMI that delivers long-lasting disease control of key diseases at any temperature for rotation flexibility and year-round confidence.
- The new, broad-spectrum DMI power of Navicon® Intrinsic® brand fungicide controls more than 20 major diseases while improving overall turf health from root to blade.

Upper Midwest

Northern Illinois, Northern Indiana, Northern Ohio, Southern Michigan and Western Pennsylvania

In this area of the country, dollar spot typically presents the most significant challenge on tees and fairways, but less so on greens due to the number of product applications and intervals. Fairy ring and brown patch are major concerns in spring, anthracnose is problematic in summer on *poa annua*, and *Pythium* is most difficult in the heat of summer.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Plant health claims are related to root strength, stress tolerance, resiliency and growth efficiency and are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
