Mid-Atlantic/Transition Zone Regional Turf Spray Program

Greens – Cool Season

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

- Intrinsic® brand fungicides provide a strong foundation of plant health benefits, including broad-spectrum disease control, stronger roots and higher stress tolerance.
- The new, turf-safe Maxtima® fungicide is a DMI that delivers long-lasting disease control of key diseases at any temperature for rotation flexibility and year-round confidence.
- The new, broad-spectrum DMI power of Navicon® Intrinsic® brand fungicide controls more than 20 major diseases while improving overall turf health from root to blade.

Mid-Atlantic/Transition Zone

Delaware, Southern Illinois, Southern Indiana, Kentucky, Southern Ohio, Maryland, Southern Missouri and Virginia

Summer stress is particularly problematic for bentgrass greens in this geography. If nighttime temperatures remain high during summer months, *Pythium* can also become a significant concern. Watch for dollar spot, brown patch, fairy ring and other patch diseases as well, as each tends to be prevalent in this climate.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Plant health claims are related to root strength, stress tolerance, resiliency and growth efficiency and are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
