

Long Island Regional Turf Spray Program

Greens - Cool Season

and the the

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

 Intrinsic[®] brand fungicides provide a strong foundation of plant health benefits, including broad-spectrum disease control, stronger roots and higher stress tolerance.

Learn how to create impressive playing conditions on your course at betterturf.basf.com

day program

Long Island

Strict state and local registration requirements limit pesticide use in Long Island, creating a challenge for superintendents. The shoreline climate produces cool springs and warmer falls. Summers are also cooler, with variation between day and nighttime temperatures not as great as the rest of the state. Humidity tends to be higher around the ocean, which contributes to more intense disease pressures.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Plant health claims are related to root strength, stress tolerance, resiliency and growth efficiency and are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
